

PMI-PBA® Exam Prep Course

Course Description

This course is designed to help you prepare for the PMI Professional in Business Analysis (PMI-PBA®) examination, offered by the Project Management Institute (PMI®). Developed by BA training industry founder Barbara A. Carkenord, this course will help you gain understanding of exam concepts, improve your business analysis skills, and significantly decrease your after-class study time.

The focus of this course will be to map each student's personal business analysis experience to the exam contents and PMI-PBA domain area, with the goal of significantly increasing each student's exam score. Unique features of this course include exercises, case studies, study tips and other tools to help you understand—NOT MEMORIZE—the concepts necessary to pass the exam.

As part of the class, each student will receive a complimentary copy of our PMI-PBA Exam Prep study guide, Hot Topics Flashcards for Passing the PMI-PBA® Exam, and a copy of our BA FASTrack® Exam Simulation Software for the PMI-PBA® Exam.

This course is offered in both Classroom-Based (Public and On-Site) and Instructor-Led Virtual methods.

Course Objectives

At the conclusion of this course, students will:

- Understand the knowledge and experience requirements for passing the PMI-PBA® certification exam
- Have a firm grasp of key project management and business analysis terminology used on the exam
- Know the areas on the PMI-PBA® exam which are the most difficult to answer questions correctly
- Find and fill personal gaps in business analysis knowledge and experience
- Develop and execute a personalized study plan to prepare for the exam
- Reduce after-class study time

PMI-PBA Domains

For each domain of the PMI-PBA examination, the course covers the business analysis work outlined in the domain along with the most commonly used tools and techniques to accomplish the work.

- **Needs Assessment** – This domain highlights the importance of evaluating business problems, opportunities, and ideas for changes using business case analysis, value propositions, stakeholder analysis, and clarifying the business objectives and benefits expected from the project results.
- **Business Analysis Planning** – a subset of project management planning, this domain includes the necessary preparation for business analysis work, establishing tools, policies and procedures for requirements management, traceability, change control and acceptance criteria using factors like project type, stakeholder location, solution type.
- **Analysis** (referred to as Elicitation and Analysis in the Practice Guide) – this domain covers the critical thinking activities which include requirements elicitation techniques (e.g. interviewing, workshops, surveys), analysis and modeling techniques (e.g. data modeling, use cases, user stories), along with validation and approval of requirements.
- **Traceability and Monitoring** – this domain focuses on managing requirements through the project life cycle including linking requirements to related requirements, tracking status, managing changes, and making sure that all requirements tie back to a business objective.
- **Evaluation** (referred to as Solution Evaluation in the Practice Guide) – this domain includes making sure that the solution, as designed and built, will truly bring value to the business using testing techniques, acceptance criteria, and gaining stakeholder signoff.

Action Plan and Testing Strategies

- Review example exam questions
- Plan for how to take the exam
- Build your personalized study plan
